Wind energy continued to strengthen its role in the USA's electricity generation during the first quarter of 2025, according to data from the Energy Information Administration analysed by ...

In addition to having locked-in energy prices for their operations, by purchasing from the wind farm, customers are able to demonstrate to stakeholders and regulators that they are powered by ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...

London, 13 November 2025 - Solar and wind have grown fast enough to meet all new electricity demand in the first three quarters of 2025, according to a new analysis from energy think tank Ember.

The first half of 2025 has been a defining period for the global wind energy sector - not only for its record-breaking growth but for the clarity it provides about the world's energy direction.

According to data from the Federal Energy Regulatory Commission (FERC), wind energy accounted for 30.1% of the new electricity capacity added in January 2025, and as the most-used renewable ...

When will countries phase out coal power? Our World in Data is free and accessible for everyone. Help us do this work by making a donation. An interactive visualization from Our World in Data.

Solar and wind made up nearly 91% of new US power capacity to the end of May 2025, according to the latest FERC data.

Newsletter The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2025 ...

2025 Wind power share in electricity generation

Global electricity demand grew by 2.6% (+369 TWh) in the first half of 2025. This increase was more than met by increases in solar (+306 TWh, +31%) and wind (+97 TWh, +7.7%) generation, ...
