Lithium-ion battery pack prices fell to a record \$108/kWh in 2025, fueled by LFP adoption and global competition.

Check each product page for other buying options. Need help?

Battery packs for popular electric vehicle (EV) models typically cost between \$5,000 and \$20,000, depending on the vehicle model and battery capacity. The average cost per kilowatt-hour ...

This cost estimate, an average of NMC and LFP pack costs, is derived using updated material prices and the peer reviewed, publicly available BatPaC battery cost modeling software developed at ...

House battery pack costs typically range from \$5,000 to \$15,000+ for residential systems, depending on capacity (5-20 kWh), chemistry (LiFePO4 vs. NMC), and brand.

Current Year (2022): The 2022 cost breakdown for the 2024 ATB is based on (Ramasamy et al., 2023) and is in 2022\$. Within the ATB Data spreadsheet, costs are separated into energy and power cost ...

In terms of EV battery pack prices, the target to bring cost parity between EVs and internal combustion engine (ICE) vehicles was always thought to be \$100/kWh. According to S& P Global ...

The cost of an electric car battery pack varies depending on the type of battery chemistry, the size and capacity of the battery, and the manufacturer. On average, a lithium-ion ...

In the electric vehicle market, battery packs averaged \$99/kWh, remaining below the \$100 threshold for a second consecutive year. Across all uses, LFP pack prices averaged \$81/kWh, while ...

Over recent years, high-scale production and capital investment into the battery production process have made lithium-ion battery packs cheaper and more efficient. This demonstrates a...
