What is a blown fuse?

A blown fuse occurs when an electrical circuit experiences an overload or short circuit, causing the thin wire inside the fuse to melt. This breaks the circuit, preventing electrical current from flowing further.

What happens if a circuit breaker blows?

In the event of an electrical fault the fuse will blow or the circuit breaker will trip. The power to the corresponding area of the house will be shut off, to prevent overloading or fire. The main difference between a circuit breaker and a fuse is that a circuit breaker can be reset; whereas once a fuse blows it must be replaced.

What causes a fuse to blow?

Faulty appliances can also cause a fuse to blow or a circuit to trip. They design a circuit breaker to trip in the event of an overload to prevent circuit wires from heating to dangerous levels. Other reasons that can cause a blown fuse are ground fault, power surge, short circuit or arc fault. **Identify Blown Fuse or Tripped Circuit**

What should I do if my switchboard fuses are blown?

If you have an older switchboard with fuses or you are experiencing regular circuit outages - "blown fuses", detect burning smells, or notice signs of deterioration, such as scorching, rusting or corroding around your circuit breaker - call AB Electrical immediately. Ignoring electrical failure can cause fires and other home-threatening problems.
