A fast curing, two-component, neutral silicone formulation specifically developed for automated window bonding applications where a fast and durable bond between glass and window frame is required.

Truemei offers premium two component silicone sealant as a secondary sealant for insulating glass. Our black silicone sealant provides excellent sealing performance.

Extrude a bead of Sikasil® IG adhesive of at least 150 mm length onto a clean glass substrate, processed identically to the original material, e.g. edge deleted glass, enameled glass, coated glass ...

In order to ensure the gas sealing performance of insulated glass, our company set the following technical standards and inspection requirements for the width of hollow glass sealant:

Hydraulic Two-component Insulating Glass Gluing Machine. Versatile and reliable, this machine is compatible with a range of sealing materials, including two-component polysulfide adhesive, silicone ...

Two component sealing machine is semi automatic sealing machine for insulating glass production line, which work instead of hand sealant, greatly improve working efficiency and ensure ...

Glaston's new automatic sealing robot ACTIVE"SEALER is an ideal solution for the automated sealing process of double and triple insulating glass units. Excellent mixing and dosing quality for all ...

The insulating glass two-component sealant sealing machine is a key equipment used in the production of insulating glass. It can mix two different sealant materials and evenly apply them on the edge of ...

It is a two parts, room temperature neutral cure silicone sealant, it has high performance specifications making it suitable for secondary seal insulating glazing.

It offers excellent adhesion to glass and spacer materials and meets the ASTM E2190 and CGSB 12 8

Double glass component sealing

standards. This product is specifically designed as a two-component silicone secondary sealant for ...
