10 December 2025 -- Today, the European Commission published the Grids Package, addressing critical bottlenecks in grid connections, permitting, and infrastructure planning. These issues have ...

This section outlines key EU projects, initiatives, and market trends in energy storage, highlighting efforts to integrate renewables, enhance grid stability, and support the clean energy transition.

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example ...

A new interactive platform--the European Energy Storage Inventory --has been launched to provide near real-time insights into energy storage deployment across the EU, marking a ...

To avoid this, grid and storage capacities are to be expanded in the EU. Pumped storage power plants convert excess wind or solar power into hydropower, and Greece is currently building...

A total of 11.9GW of energy storage across all scales and technologies was installed in Europe in 2024, LCP Delta has said.

The group said EU countries should be encouraged to use energy storage across electricity networks to increase the flexibility of the power transmission system and support the ...

The study highlights the recent Clean Industrial Deal with new state aid rules and the Affordable Energy Action Plan as promising for driving energy storage deployments in Europe - ...

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new opportunity ...

The European Network of Transmission System Operators for Electricity (ENTSO-E) has published its Phase

EU Grid Energy Storage Power Station

II technical report on grid-forming requirements, outlining how generators, ...
