Bulk energy storage incentives are applicable to ESS projects between 5 and 20 MW in capacity and are available through the New York State Energy Research and Development Authority (NYSERDA).

Among many sustainable features, the building includes energy efficient applications incorporating Alfa Laval heat exchangers that are used in free cooling, ice thermal storage and in a ...

Free Cooling and Thermal Ice Storage Heat Recovery in A Combined Heat and Power Plant Substantial Energy Savings By combining three modern technologies - free cooling, ice thermal storage and combined heat and power generation, Bank of America greatly reduces its use of energy and emissions of CO2. As an example, the heat recovery system is able to capture 70% of the energy contained in the natural gas used - compared to only 30% in a typical utility plant. See more on [alfalaval](#).
