Can abandoned mines be used for pumped storage power stations?

The unique features of abandoned mines offer considerable potential for the construction of large-scale pumped storage power stations. Several countries have reported the conversion of abandoned mines to pumped storage plants, and a pilot project for the conversion of an underground reservoir group has been formalized in China.

Are underground pumped storage power stations sustainable?

Underground pumped storage power stations (UPSPS) using abandoned coal mines efficiently utilize the coal mine space and promote renewable energy applications. This paper introduces a novel framework to evaluate the UPSPS regional development potential in the Yellow River Basin (YRB) from the perspective of sustainable development.

How was the abandoned mine converted into a pumped storage system?

The surface/underground space of the abandoned mine were converted into an energy storage reservoir, and a water delivery system was put in place to constitute a pumped storage system [24,25].

How is a pumped storage power station constructed?

A pumped storage power station is constructed by utilizing the difference in heights between the abandoned open pits. Since the upper and lower reservoirs are completely exposed to the surface, it is also called open abandoned-mine pumped storage (Figure 3).

The construction of pumped storage power stations using abandoned mines not only utilizes underground space with no mining value (reduced cost and construction period), but also ...

New energy power systems have high requirements for peak shaving and energy storage, but China's current energy storage facilities are seriously insufficient in number and scale. The unique features of ...

Repurposing abandoned coal mines for underground pumped storage development Pumped storage continues to ramp up the role it will play in global energy transitions.

A compressed air energy storage (CAES) power station utilizing two underground salt caverns in Yingcheng

# Energy storage power station project involves covered mines

City, central China's Hubei Province, was successfully connected to the grid at ...

The share of new energy in China's energy consumption structure is expanding, posing serious challenges to the national grid's stability and reliability. As a result, it is critical to construct ...

As an energy basin, the Yellow River basin is a key demonstration area to promote energy system reform in China. There are a large number of abandoned mines in the Yellow River ...

China is gradually transforming its coal-based energy supply structure towards sustainable development, resulting in a growing number of abandoned coal mines. Underground ...

The construction of Pumped storage power station entails large investment, strict requirements on environment, society, economy and safety, thus its site selection is highly influenced by numerous ...

This article delineates five crucial scientific considerations and outlines seven primary models for the utilization of abandoned mine sites, delineating a novel, comprehensive pathway for ...
