Curious about what the inside of a wind turbine looks like? Discover its inner workings and how they harness clean energy. Dive in now for an enlightening peek!

Have you ever wondered what lies inside a wind turbine? Join us as we uncover the complex workings hidden beneath the turbine's nacelle.

The workings of a wind turbine are much different, except that instead of using a fossil fuel heat to boil water and generate steam, the wind is used to directly spin the turbine blades to get the generator ...

Wind turbines hold immense potential in the transition to a cleaner and more sustainable future. Through detailed diagrams, we can unravel the intricate inner workings of wind turbines, ...

Yaw drive: Upwind turbines face into the wind; the yaw drive is used to keep the rotor facing into the wind as the wind direction changes. Downwind turbines don't require a yaw drive, the wind blows the ...

Wind turbine blades are designed with aerodynamic profiles similar to airplane wings. As wind flows over the blades, it creates a pressure difference, generating lift that causes the blades to ...

But how does a wind turbine actually work? In this video, we take a clear and visual look inside a modern wind turbine and explain how wind energy is converted into electricity.

Wind turbines work on a simple principle: instead of using electricity to make wind--like a fan-- wind turbines use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, ...

During the commissioning phase of a Wind Turbine Generator (WTG), the system experiences Significant Turbulence & Load Variations. These forces are not static.
