How much electricity does the Gambia generate each year? Like total energy, the amount of electricity a country generates in total is largely reflected by population size, as well as the average income of ...

As of 2023, electricity consumption in Gambia stands at 189 kWh per person, which is starkly below the global average of 3649 kWh per person. Gambian electricity is entirely derived from fossil fuels, with ...

In Gambia, 55% of the overall population does not have access to electricity and only 10% have access to clean cooking facilities.

Bolstered by renewable energy and climate-resilient infrastructure, The Gambia has set the ambitious target to achieve 90% electricity access by 2025.

The Gambia has set out an ambitious plan to achieve near-universal electricity access within the next two years, positioning regional power trade and cross-border gas developments at the ...

Gambian households make up 44% of the country's electricity demand. Around 90% of those households use wood and charcoal as sources for cooking fuel. Not only does this pose ...

As of 2021, only 69 percent of the population had access to electricity, with rural access significantly lower at 28 percent. The country's energy generation capacity is currently about 40 megawatts, ...

Find relevant information for Gambia on energy access (access to electricity, access to clean cooking, renewable energy and energy efficiency) on the Tracking SDG7 homepage.

Access to electricity is estimated at 56.2% of the population with only 13% access in rural areas. The current installed power capacity of 102 MW falls short of peak demand by 11 MW.

Boost domestic power supply security by expanding domestic generation and increasing the share of

Gambia electricity generation

renewable energy in the generation mix from the current 13% (inc. imports) to 30% by 2030.
