-----

With more than 5,000 units in operation worldwide, GE's 1.5 MW turbine continues to be one of the world's most widely used wind turbines in its class. There are 4 complete units with 64m Tower, 70m ...

GE's new 1.5-77 (Class I) with Advanced Loads Control shares components with the 1.5-77 (Class II) and 1.6-82.5 creating one common 1.5 MW wind turbine series platform. This ensures consistent ...

Building on a strong power generation heritage spanning more than a century, our 1.5 MW wind turbine--also known as the industry workhorse--delivers proven performance and reliability, creating ...

There are no power data deposited for this turbine. There are no models to this Windturbine. The wind turbine GE 1.5sle is a production of GE Vernova, a manufacturer from United States. This ...

Learn about GE's 1.5-77 (Class I) wind turbine, a three-blade, upwind, horizontal axis wind turbine with a rotor diameter of 77 meters and a capacity factor of 57.9%. The web page ...

Building on the exceptional turbine performance and reliability of our 1.5 MW series platform, GE advanced its original Class I wind turbine, the 1.5-70.5, with increased rotor length and ...

GE's 1.5 MW series is represented by three-blade, upwind, horizontal axis wind turbines with a rated capacity of 1.5-megawatts. Three different models represent the 1.5 MW series - 1.5se, 1.5sle, and ...

The first 1.5-megawatt wind turbine was installed in April of 1996 in Germany, and quickly developed into the workhorse of the GE Energy wind turbine fleet worldwide.

With a core focus on enhancing efficiency, reliability, site flexibility and delivering multi-generational product advancements, GE's 1.5 MW wind turbine is the most widely used turbine in its class.
