Many hand crank flashlights and lanterns are now incorporating a backup solar panel into their design. This lets you effortlessly top up the charge in sunny weather for the night to come.

It comes with both a hand crank and a decent-sized solar panel. To get it up to full charge, you'd need to leave it in the sun for 40 hours, which isn't necessarily feasible in an emergency.

Eliminate the need for batteries or power with one of our mechanical lanterns or flashlights. Shop today and ensure quick access to emergency lighting.
