Should I add battery storage to my Home Solar System?

Adding battery storage to home solar systems is an increasingly popular choice with a plethora of options for both full off-grid systems, as well as grid-connected systems popping up for consumers.

Where should IQ batteries be mounted?

On page 2, it says: Plan the mounting location to be at least 15 cm (6 in) off the ground and from the ceiling. The minimum spacing around IQ Battery 5 MUST be at least 15 cm (6 in) from the top, bottom, left, and right side of the product. The batteries (with cover installed) are 39" tall.

How tall should IQ battery 5 be?

The minimum spacing around IQ Battery 5 MUST be at least 15 cm (6 in) from the top, bottom, left, and right side of the product. The batteries (with cover installed) are 39" tall. Two batteries, with 6" below the bottom unit, 6" between the units, and 6" above the top unit would be 6" + 39" + 6" + 39" + 6" = 96"; so the answer is "Yes".

How far should a IQ battery be from a roof?

When installing more than one IQ Battery there should be at least one foot (300 mm) clearance between the upper battery and the lower battery. And the same distance should also be maintained between Ground to battery and Roof to battery. I was able to find a line diagram in Enphase IQ Battery Installation Manual.

It is a little more specific about mounting position. On page 2, it says: Plan the mounting location to be at least 15 cm (6 in) off the ground and from the ceiling. The minimum spacing around IQ Battery 5 ...
