The halted project--a 250MW lithium-ion battery system in Sardinia--wasn't just about storing electrons. It symbolized Italy's race to meet EU's 2030 renewable targets.

"It is reasonable to expect that, when fully operational, all new renewable energy plants will already be installed with integrated storage systems. And where the market does not cover the...

As the penetration of solar power increases, grid stability has become a critical issue. In response, Italy is prioritizing the development of grid-scale battery energy storage systems (BESS ...

The Italian government has authorized eight BESS projects that will strengthen the stability of the power grid. Companies such as Edison Next and GreenGo stand out in this initiative.

MP: The future of energy storage in Italy is bright. With investments in technology, regulatory support, and declining costs, BESS will become a key pillar of Italy's transition to a ...

The Italian utility-scale battery storage market is one of the most exciting in Europe. Just under 4GWh is completed and/or operational, with a further 2GWh+ under construction.

The scheme will run until 31 December 2033. The measure aims to facilitate the integration of renewable energy sources ("RES") in the Italian electricity system. The production of electricity by RES does not ...

In August 2024, the European Commission approved a EUR8 billion Italian national plan to support the construction and operation of centralized power storage systems, in accordance with EU state aid rules.

The scheme is expected to accelerate Italy's and the EU's journey to a greener future by supporting the energy storage solutions needed for the continent's projected 80% renewable energy ...

Italy has taken a major step forward in its energy transition efforts, giving the green light to 361 MW of new

Italian Republic Energy Storage Project

battery energy storage systems (BESS) spread across three regions--Lazio, Puglia, ...
