What are electronic cabinet cooling systems?

Our electronic cabinet cooling systems are designed for use with a wide range of enclosures and transit cases. Models are available for both indoor and outdoor use in AC and DC power configurations. Coolers feature corrosion-resistant stainless steel construction. Protecting critical infrastructure through harsh climates and extreme weather

What type of stainless steel is used for electrical cabinets?

They are designed with the tightness required for electrical cabinets (IP66,IP67,and IP68) depending on their location and with the maximum durability to the corrosion,it is possible to use stainless steel AISI 304lor AISI 316L (marine).

How does convection control the internal temperature of an enclosure?

Convection is the most common method to control the internal temperature of an enclosure. Natural convection is caused by hot air rising resulting in natural air circulationwhile forced convection uses a fan to provide higher heat transfer rates.

We design and manufacture electrical cabinets for areas with extreme temperature conditions, both in high and in low temperature.

In this beginner"s guide, learn WHY electrical enclosure climate control is important and HOW to dissipate the heat with better cabinet design & technology.
