How do I test a 18V solar panel voltage output?

To test a 18V solar panel voltage output directly, put your solar panel in direct sunlight, set your multi-meter to the DC "volts" setting.

How do you calculate wattage of a solar panel?

After doing your solar panel testing, you should find that the solar panel output (for the solar panel you built) is about 21 volts and 5 amps. Whenever you have these two values you can figure out the wattage by multiplying them together. Volts x Amps = Watts So... 21 Volts x 5 Amps = 105 Watts
