The object is to stabilize energy prices for generations to come by adopting the lowest cost, unsubsidized solar and wind production and distribution systems. We believe it is only a lack of ...

Solar continues to be the main fuel type for new additions, with over 30,000 MW of solar energy added in 2024, nearly double the amount added in 2023. This report also analyzes prospective generation ...

The Solar Program is executing the Solar America Initiative by working with industry, national laboratories, universities, and other members of the solar energy community.

Solar deployment and electric vehicle (EV) sales broke records in 2023 and 2024. Renewables now dominate new power generation capacity, while new domestic clean energy ...

WASHINGTON -- The Department of the Interior today announced an updated roadmap for solar energy development across the West, designed to expand solar energy production in more ...

Developers added 12 gigawatts (GW) of new utility-scale solar electric generating capacity in the United States during the first half of 2025, and they plan to add another 21 GW in the ...

Solar energy is the conversion of sunlight into usable energy forms. Solar photovoltaics (PV), solar thermal electricity and solar heating and cooling are well established solar technologies.

Actions to expand generation and consumption of solar and wind energy are seen in three distinct arenas: (1) incentivizing renewable energy production and use, (2) increasing the use of ...

"Thanks to President Biden's Investing in America agenda, this historic boost in solar investments will advance millions of residential solar projects nationwide, protect people and the ...

o At the end of 2024, solar was the second-largest source of U.S. generation capacity, though still a growing

National Solar Power Generation Plan

percentage of the U.S. electric generation mix. o In 2024, solar represented ...
