How to connect a solar panel to a inverter?

Begin by connecting the positive and negative leads of the solar panel to the corresponding terminals on the inverter. Then, connect a charge controller between the solar panels and the inverter to manage the current flow and protect the inverter from damage. You can also connect DC MCB or Surge Protection Device between the panel and controller.

How does a solar inverter work?

The inverter converts the DC electricity to alternating current (AC) electricity which is compatible with the electricity supplied to your house from the grid. The inverters have a digital readout so you can monitor information such as the amount of solar electricity produced, etc. Refer to the separate inverter owner's manual for more information.

Where should a solar inverter be installed?

When deciding on the installation location for your solar inverter, several factors must be considered. Ideally, the inverter should be installed indoors, near a sub-board for houses or the main switchboard for businesses.

Should you install a solar inverter at home?

Installing a solar inverter at home establishes an effective PV panel, reducing energy costs and promoting sustainability. Key factors like cost assessment and location selection are essential for optimal performance and longevity.
