Can peak shaving reduce energy costs?

Modern consumers actively seek cost-effective energy solutions and sustainable practices. This white paper explores peak shaving as an effective method to minimize energy costs. Energy and facility managers will gain valuable insights into how peak shaving applications can help unlock the full potential of energy storage systems.

What is peak shaving in power system?

In the power system, the load usually shows "peak" and "valley" differences. It refers to the fact that the load is higher during certain times of the day and lower during other times of the day. In order to meet the peak demand, the power system needs to carry out peak-shaving.

How can energy storage technology help in peak shaving?

Energy storage technologies, such as battery energy storage systems (BESS), can be crucial in peak shaving. Within off-peak hours, energy consumers can store energy in these battery systems.

Is peak shaving a future-ready energy storage system?

The energy landscape is evolving fast. With dynamic pricing, virtual power plants (VPPs), and increasing renewable penetration, peak shaving is set to become even more essential. Future-ready energy storage systems will not just manage peaks--they'll: Choosing a partner with scalable, flexible, and certified systems is crucial.
