How do I Reset my solar panel?

To do a hard reset, disconnect the solar panel and battery wires and wait a few minutes before reconnecting the wires. If your solar panel has no voltage or not working properly, there might be a problem with your charge controller. Now is a good time to do a soft reset.

When should a charge controller be reset?

Charge controllers should only be reset if there is a problem in the solar panel. Some like to reset the controller every once in a while to refresh the system. However it is not necessary, at least in newer models. The only time you should be rebooting it is if the solar panel or battery is not running properly.

How do I Reboot my battery if the vent is flat?

In the vent where the battery is flat do NOT switch over the change over switch. Proceed to the next step Your system is now rebooted. If your batteries were in a flat stage leave the change over switch in the bottom position until your batteries reach at least 75% before switching it up There is 4 steps to doing this.

How do I fix a faulty solar panel controller?

Some of the issues that you may be able to fix are the following. Moon error symbol. This usually appears on the display when the controller cannot detect any voltage from the solar panels. The usual fix - and often the most effective - is to do a hard reset. Disconnect the cable and use a multimeter to check the panels status.
