---

The decree is a legislative intervention to address key vulnerabilities identified post blackout by increasing storage, electrification and system oversight.

Spain has launched an ambitious EUR700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes ...

Spain has chosen the 143 energy storage projects that will receive capex support from an EU-backed scheme, totalling nearly 9GWh of capacity.

While renewable energy sources account for 67% of Spain's energy mix, complementary storage capacity represents a mere 0.3% of power demand, exposing a critical structural imbalance ...

Spain's new decree on energy storage in Spain sets a 22.5 GW target by 2030, boosting grid resilience, hybrid projects, and industrial electrification.

The Spanish government has approved a royal decree aimed at strengthening the power grid's resilience, robustness and stability in response to the nationwide blackout in April.

Spain's battery storage program expanded to EUR840M, funding 143 projects totaling 8.9GWh. Learn how this initiative creates opportunities for solar-storage hybrids and boosts grid ...

Spain continues to adjust policy and make sweeping changes to both prevent a reoccurrence of a major blackout, while supporting standalone storage and hybrid projects. Spain has ...

To promote energy storage, the decree facilitates the integration of storage systems into the grid -- key to achieving Spain's target of 22.5 GW of installed storage capacity by 2030, as ...

# Spain s power emergency energy storage plan

The European Commission has approved a new aid scheme that will allow Spain to deploy large-scale electricity storage, both in hybridisation with renewable energy facilities and stand ...
