---

As a market leader for industrial steam turbines, we offer a comprehensive range of reliable and versatile steam turbines for the power output range from 2 to 250 MW. Our industrial steam turbines ...

It is a single-axis, three-cylinder, two- exhaust turbine of the 660 MW class with a once-through reheat. The turbine's flow efficiency and thermal performance are excellent.

In CHP applications, steam at lower pressure is extracted from the steam turbine and used directly in a process or for district heating, or it can be converted to other forms of thermal energy including hot or ...

Our steam turbine portfolio has the breadth and depth to meet any project-specific need, integrating seamlessly with our gas turbines, HRSGs, and balance of plant equipment to ensure operational ...

The CN300 from Concepts NREC is designed for converting low temperature heat to electric power using an Organic Rankine Cycle (ORC) process.

The turbine is able to provide process steam e. g. for industries or sea water desalination and can provide industrial heating. Thanks to its systematically modular design, the SST-4000 series can ...

The 4x600MW power plant will be fitted with GE' s high efficiency ultra-supercritical technology, including boilers, steam turbines, generators and other equipment, with environmental control ...

TGM offers a complete line of steam turbines for mechanical drives and applied in electric energy generators. They operate on maximum conditions of 2030 psia, 1004°F and 150MW.

It sounds crazy, yet it's not so far from the truth. Unless you're using renewable energy from something like a solar panel or a wind turbine, virtually every watt of power you consume comes ...

# Steam turbine generator with low wind temperature

In a combined-cycle configuration, a gas turbine generator produces electricity and its hot exhaust gases are used to generate steam for a steam turbine. This cascading use of energy ...
