With four years of Joe Biden's climate activism in the rearview mirror, the Pacific Northwest appears to have blown its best chance to realize its ambitions for renewable power.

We see more hours of daylight on those days, increasing the potential for harnessing the power of the sun. While we don't see the same results in kilowatts hours (kWh) as residents in ...

Overall, the short-term outages caused by extreme weather--such as outages due to PV modules being disturbed by strong winds or inverters ...

To meet climate targets, the Northwest needs to build unprecedented amounts of wind and solar power and the electric transmission lines to carry it. Easier said than done.

Overall, the short-term outages caused by extreme weather--such as outages due to PV modules being disturbed by strong winds or inverters being damaged by flooding--have a minimal ...

If the U.S. moves to carbon-free energy production by 2050, solar panels could require up to 0.5% of the land area of the lower 48 states. Shifts to solar could reduce water usage by 88% ...

In this article, we will explore the truth behind solar power in the Pacific Northwest, provide research-based evidence, and tackle misconceptions that prevent many eco-conscious ...

Choices made early on, like the inter-panel and inter-row spacing between solar panels, will impact the kind of farming that can be supported. In conclusion, the long-term success of ...

Climate change has caused unprecedented warming, varying precipitation patterns, and higher risks of drought and wildfires across the Northwest. These impacts threaten agriculture, natural resources, ...

The photovoltaic panels in the Northwest have a huge impact

While some in rural Oregon welcome the revenue and the changes, others see the billions of solar panels as a threat to their way of life, wildlife habitat, scenic views and tourism - and ...

Among these energies, solar photovoltaic (PV) energy is one of the most promising sources of power with the potential of providing one fifth of the annual energy in US alone.
