-----

UK renewable energy developer Island Green Power (IGP) on Tuesday unveiled early-stage plans for a utility-scale solar and battery energy storage system (BESS) with a potential ...

The project is set to be operational by January 2028, with the entire facility targeted for completion by 2030. This stability island can operate independently from the energy storage ...

As well as the stability island, the facility at Hunterston will eventually incorporate a hybrid long duration energy storage system, combining both liquid air storage and lithium-ion...

Island Green Power has unveiled plans for a utility-scale solar and battery energy storage system (BESS) project, slated for development in Norfolk, England.

Highview has secured funding to begin work on its second long-duration energy storage (LDES) site in the UK. The company raised £130 million for the first stage of its planned 3.2GWh ...

By delivering much-needed grid services in this location, our stability island asset will prevent costly curtailment and maximise the renewable energy that we generate in the UK.

Island Green Power has completed its second consultation on a proposed 500 MW solar project in Norfolk, England, with BESS capacity "up to 500 MWh" according to the project website.

This follows completion of the Phase Two statutory consultation for the project, which would combine a utility-scale solar farm and a battery energy storage system (BESS).

Highview Power is creating the largest energy storage facility of its kind, which will store surplus electricity from wind and solar farms. The two-stage Hunterston project is supporting 1,000 ...
